The 350 Series mobile pump is an advanced, closed circuit, servo controlled, axial piston design offered as either a single or dual pump (two pumps in one housing) for medium duty hydrostatic circuits. These pumps can be combined with an Eaton motor to transfer and control hydraulic power in many different ways.

An efficient, reliable and durable rotating piston group allows the 350 series pump to maintain continuous pressures to 280 bar (4000 psi) and 380 bar (5500 psi) rated levels. This pressure capability, coupled with high allowable input speed (3600 RPM), along with a compact package means superior power density in the market place.

High load, taper roller bearings and a stiff drive shaft help provide long bearing life at rated mobile conditions, reducing operating costs and extending operating life. 350 Series pumps feature a needle bearing under the swash plate. This feature provides for better temperature and contamination resistance. The swash plate bearing offers low control hysteresis when matched with Eaton control technologies.

The 350 series pump offers the latest design in Eaton technologies for closed circuit piston pumps along with a wide variety of responsive controls. These controls include mechanically or electrically-actuated feedback controls, hydraulic or electronic proportional controls and a three position (Forward-Neutral-Reverse) electric control.

A large input shaft diameter allows more through put power, even with an integral charge pump. When the 350 series pump is fully loaded as much as 56 kW (75 hp) of through put power is available for auxiliary hydraulic power needs from the SAE B auxiliary mounting pad. 350 Series pumps operate at a level of quietness that exceeds the requirements of today’s demanding work conditions. Another pump feature—a serviceable, bimetal valve plate - improves pump filling characteristics which, in turn, reduces fluid-borne noise and extends pump life. A highly engineered pump housing and swash plate also minimizes noise and vibration.

Mounting flanges are offered in SAE B and C configurations and ports are offered in SAE, ISO tube and flange and STC direct port versions. Opposite or same side port versions are available to facilitate plumbing and help the pump fit your machine space needs. An integral gerotor charge pump can be provided with up to four different displacement sizes allowing for either remote or inlet charge filter options.

The 350 series pump offers a full range of product features and has the ability to match the needs of many different customer platforms. It supports increased power requirements in Agricultural, Construction and Utility markets and allows for a wide variety of installation opportunities for global machine design.

Feature Locations

1. Solenoid Displacement Control
2. Symmetrical 4 Bolt Design
3. Polyacrylate Shaft Seal
4. 15-Tooth Splines
   14-Tooth Splines
   Taper Input Shafts
   Shaft Mounted on Tapered Roller Bearings
5. Case Drains Location (one connection needed)
6. Optional Speed Pickup Location
7. Same Side or Opposite Side Main Work Ports
8. Swash Plate Bearings
9. Swash Plate Position Sensors

Controls

- Mechanical servo and hydraulic (non-feedback)
- Electro-proportional “EP”
- Proportional valve control with electronic swash plate feedback
  - Non-contacting sensor
  - Fast response, precise, real-time pump control
  - Best electro-hydraulic control for mobile hydrostatic transmissions available on the market today*

* Interface requires proprietary Eaton electronic control or control algorithms

Features

- Symmetrical 4-Bolt design
- Polyacrylate Shaft Seal
- 15-Tooth splines, 14-Tooth splines, Taper Input Shafts
- Case Drains location (one connection needed)
- Shaft mounted on Tapered roller bearings
- Optional Speed Pickup Location
- Swash plate bearings
- Same Side or Opposite Side Main Work Ports

Typical Applications

- Stump Grinders
- Compact Wheel Loaders
- Rough Terrain Fork Lifts
- Material Handling Equipment
- Skid Steer Loaders
- Windrowers/Sprayers

Specifications:

Continuous Pressure: 280 Bar (4000 psi)
Rated Pressure: 380 Bar (5500 psi)
Displacements: 41cc (2.50 cid), 49 cc (3.00 cid), 62 cc (3.80 cid).

Estimated weight for a 350 series pump with opposite side main ports with charge pump - 81.8 Kg (181 lbs).
